

a proven track record across a wide range of sectors

Process Engineering

With vast experience in both manufacturing operations and design, our process engineers can address all aspects of your project from a practical as well as a theoretical perspective. We combine an extensive knowledge of unit operations with an ability to partner with technology suppliers to ensure you derive maximum benefit. Our proven track record extends across a wide range of sectors, from specialist chemicals manufacture through petrochemicals and GMP design for food production.

Our process control engineers have experience of most major Programmable Logic Controller and Distributed Control systems in developing process automation schemes for specialised areas such as continuous and batch system control schemes and statistical analysis of real time plant performance.

We have a broad knowledge base of regulatory and operational requirements including PSM (Process Safety Management), COMAH (Control of Major Accident Hazards) and PER (Pressure Equipment Regulations). Our services include undertaking safety audits, HAZAN/HAZOP facilitation, SIL (Safety Integrity Level) assessments, relief valve verification, and assistance with the necessary application and implementation processes.
